. . " A: Use var jsonString = json.Replace(" ", ""); A thermocouple generally comprises a pair of electrical wires which are joined at their opposite ends to form a thermoelectric junction. Typically, one of the pair of electrical wires is heated, and the other of the pair is cooled. Thus, the thermoelectric junction of the thermocouple may be used to generate an electrical potential difference which may be converted to a readable and/or storable form. It is often desirable to measure the temperature of a sample using a thermocouple. By way of example, it may be desirable to measure the temperature of a temperature-sensitive material, such as, for example, a semiconductor wafer. By way of further example, it may be desirable to measure the temperature of a working fluid (e.g., during processing of a semiconductor wafer). A sensor for measuring the temperature of the sample may be connected to a readout circuit. The readout circuit may be connected to a display device, such as a monitor, and/or a recording device, such as a digital camera. The readout circuit may be configured to store a measured temperature of the sample. The stored temperature may be used to provide the user with an indication of the temperature of the sample, as well as to control aspects of the operation of the device in which the sample is located (e.g., process or apparatus) or may be used to

affect characteristics of the sample (e.g., affect the rate of oxidation).
11 Suppose $-4w - w + 20 = 0$. Suppose $-2x + 4x - 22 = 2d$, $-x + 22 = wd$. Calculate the remainder when 30 is divided by x .
8 Let $y(s) = s^2 + 11s + 4$. Let c be $y(-11)$. Suppose $c^v + 14 = 58$. What is the remainder when v is divided by 6?
4 Let $w = -5 - 16$. Suppose $-6p = -p + 5i - 5$, $0 = -5p - i + 23$. What is the remainder when w is divided by p ?
Let $i(o) = -o^3 - 11o^2 - 12o + 8$. What is the remainder when 51 is divided by $i(-82157476af)$
